# List of Tables

# List of Figures

# General Introduction

This template demonstrates some of the basic latex you'll need to know to create a MT or DT in Tsukuba Univ. BP. RMarkdown Cook Book will answer the almost question you have.

# Chapter 1

## Chapter 1 Title

This section will be just provide the reference examples. You can add references by adding `@hoge hoge` in RMarkdown and .bib file. A simple way to make a .bib file is to use google scholar(see [here](#) or [here](#)). Also `citr` package help you.

We can use four inline citation styles as belows:

- `[@singlecite]`: single citation
- `[@cite1; @cite2]`: multiple citations
- `[-@singlecite]`: just display the year
- `[see @cite1 p 12; also this ref @cite2]`: valid syntax

We provide the example below. Multicellular organisms are keeping time not by one clock but by averaging many independent circadian oscillators (Winfree 1975). Our state are consistent with Darwin (2004) and Smith and Maynard (1993).

# Chapter 2

## Chapter 2 Title

This section will provide the `\chapter` and `\section` functions in the RMarkdown file. The both `\chapter` and `\section` functions provide the numbering sections but this sample RMarkdown files mainly use `\chapter` for following structure of contents.

- Title
- Abstract
- List of Tables
- List of Figures
- General Introduction
- Chapter 1
- Chapter 2
- General Discussion
- References

If you want to add section (i.e., Introduction in Chapter 2), then add `\section` function after `\chapter{Chapter 2}`.

Like this.

### 2.1 Introduction in Chapter 2
